**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

**1. Description of Business and Basis of Presentation**

DCP Midstream, LLC, with its consolidated subsidiaries, or us, we, our, or the Company, is a joint venture owned 50% by Phillips 66 and its affiliates, or Phillips 66, and 50% by Spectra Energy Corp and its affiliates, or Spectra Energy. We operate in the midstream natural gas industry and are engaged in the business of gathering, compressing, treating, processing, transporting, storing and selling natural gas and producing, fractionating, transporting, storing and selling natural gas liquids, or NGLs, and recovering and selling condensate. Additionally, we generate revenues by trading and marketing natural gas and NGLs.

DCP Midstream Partners, LP, or DCP Partners, is a master limited partnership, of which we act as general partner. As of March 31, 2015 and December 31, 2014, we owned an approximate 21% and 22% interest in DCP Partners, respectively, including our limited partner and general partner interests. We also own incentive distribution rights that entitle us to receive an increasing share of available cash as pre-defined distribution targets are achieved. As the general partner of DCP Partners, we have responsibility for its operations.

We are governed by a five member board of directors, consisting of two voting members from each of Phillips 66 and Spectra Energy and our Chairman of the Board, President and Chief Executive Officer, a non-voting member. All decisions requiring the approval of our board of directors are made by simple majority vote of the board, but must include at least one vote from both a Phillips 66 and Spectra Energy board member. In the event the board cannot reach a majority decision, the decision is appealed to the Chief Executive Officers of both Phillips 66 and Spectra Energy.

These condensed consolidated financial statements reflect all adjustments, consisting only of normal recurring adjustments, that are, in the opinion of management, necessary to present fairly the financial position and results of operations for the respective interim periods. Certain information and notes normally included in our annual financial statements prepared in accordance with generally accepted accounting principles, or GAAP, have been condensed in or omitted from these interim financial statements pursuant to such rules and regulations, although we believe that the disclosures made are adequate to make the information not misleading. Results of operations for the three months ended March 31, 2015 are not necessarily indicative of the results that may be expected for the year ending December 31, 2015. These unaudited condensed consolidated financial statements should be read in conjunction with our audited consolidated financial statements for the year ended December 31, 2014.

The condensed consolidated financial statements have been prepared in conformity with GAAP. GAAP requires management to make estimates and assumptions that affect the amounts reported in the condensed consolidated financial statements and notes. Although these estimates are based on management's best available knowledge of current and expected future events, actual results could differ from those estimates. These condensed consolidated financial statements include the accounts of the Company and all majority-owned subsidiaries where we have the ability to exercise control and undivided interests in jointly owned assets. We also consolidate DCP Partners, which we control through our ownership and general partner interest, and where the limited partners do not have substantive kick-out or participating rights. Investments in greater than 20% owned affiliates that are not variable interest entities and where we do not have the ability to exercise control, and investments in less than 20% owned affiliates where we have the ability to exercise significant influence, are accounted for using the equity method. Intercompany balances and transactions have been eliminated.

**2. Recent Accounting Pronouncements**

***Financial Accounting Standards Board, or FASB, Accounting Standards Update, or ASU, 2015-03 "Interest – Imputation of Interest (Subtopic 835-30): Simplifying the Presentation of Debt Issuance Cost," or ASU 2015-03*** — In April 2015, the FASB issued ASU 2015-03, which requires debt issuance costs to be presented in the balance sheet as a direct deduction from the associated debt liability. This standard requires retrospective application. This ASU is effective for annual reporting periods beginning after December 15, 2015, after which we will present debt issuance costs as a direct reduction from debt on our condensed consolidated balance sheets for all periods presented. The adoption of this ASU will have no impact on our condensed consolidated results of operations and cash flows.

***ASU 2015-02 "Consolidation – (Topic 810): Amendments to the Consolidation Analysis," or ASU 2015-02*** — In February 2015, the FASB issued ASU 2015-02, which changes the analysis that a reporting entity must perform to determine whether it should consolidate certain types of legal entities. This ASU is effective for annual reporting periods beginning after December 15, 2015, and we are currently assessing the impact of adoption of this ASU on our condensed consolidated results of operations, cash flows and financial position.

**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS — Continued**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

**ASU 2014-09 “Revenue from Contracts with Customers (Topic 606),” or ASU 2014-09** — In May 2014, the FASB issued ASU 2014-09, which supersedes the revenue recognition requirements of Accounting Standards Codification, or ASC, Topic 605 “Revenue Recognition.” This ASU is effective for annual reporting periods beginning after December 15, 2016. In April 2015, the FASB proposed to defer the effective date of this ASU to December 15, 2017, with the option to adopt as early as December 15, 2016. The FASB has not yet voted on the proposal. We are currently assessing the impact of adoption of this ASU on our condensed consolidated results of operations, cash flows and financial position.

### **3. Acquisitions**

In January 2015, DCP Partners entered into an agreement with an affiliate of Enterprise Products Partners L.P., or Enterprise, to acquire a 15% ownership interest in Panola Pipeline Company, LLC, or Panola. At closing, DCP Partners paid \$1 million for its interest in the joint venture. The anticipated total consideration of approximately \$26 million includes DCP Partners’ proportionate share in construction costs for an anticipated expansion of the existing Panola NGL pipeline. The Panola NGL pipeline originates in Carthage, Texas and extends approximately 180 miles to Mont Belvieu, Texas. The expansion will extend the Panola NGL pipeline approximately 60 miles and increase capacity from approximately 50 MBbls/d to 100 MBbls/d. DCP Partners, WGR Asset Holding Company LLC, which is an affiliate of Anadarko Petroleum Corporation, and MarkWest Panola Pipeline L.L.C. will each own a 15% interest in Panola. Enterprise will own a 55% interest in Panola and will construct the expansion and operate the pipeline. In accordance with the joint venture agreement, DCP Partners will not participate in the earnings of the Panola pipeline until the expansion is complete, which is expected to be in the first quarter of 2016.

### **4. Dispositions**

In January 2015, we entered into a purchase and sale agreement with Mustang Gas Products, LLC to sell our approximate 44% interest in the Dover-Hennessey gas processing plant and gathering system for approximately \$29 million, subject to customary purchase price adjustments. This transaction closed on January 30, 2015, and we recognized a \$10 million gain on sale in the condensed consolidated statement of operations for the three months ended March 31, 2015.

### **5. Agreements and Transactions with Related Parties and Affiliates**

#### ***Dividends and Distributions***

Under the terms of the Second Amended and Restated LLC Agreement dated July 5, 2005, as amended, or the LLC Agreement, we are required to make quarterly distributions to Phillips 66 and Spectra Energy based on allocated taxable income. During the three months ended March 31, 2014, we recorded tax distributions payable to the members of \$61 million, which were paid in the second quarter of 2014. No tax distributions were declared or paid during the three months ended March 31, 2015. Our board of directors determines the amount of the periodic dividends to be paid by considering net income attributable to members’ interests, cash flow or any other criteria deemed appropriate. During the three months ended March 31, 2014, we declared and paid dividends of \$118 million. No dividends were declared or paid during the three months ended March 31, 2015.

DCP Partners considers the payment of a quarterly distribution to the holders of its common units, to the extent DCP Partners has sufficient cash from its operations after establishment of cash reserves and payment of fees and expenses, including payments to its general partner, a 100% owned subsidiary of ours. During the three months ended March 31, 2015 and 2014, DCP Partners paid distributions of \$70 million and \$51 million, respectively, to its public unitholders.

#### ***Phillips 66 and CPChem***

**Long-Term NGL Purchases Contract and Transactions** — We sell a portion of our NGLs to Phillips 66 and Chevron Phillips Chemical LLC, or CPChem. In addition, we purchase NGLs from CPChem. CPChem is owned 50% by Phillips 66, and is considered a related party. Prior to December 31, 2014, approximately 35% of our NGL production was committed to Phillips 66 and CPChem, under 15-year contracts, the primary production commitment of which began a ratable wind down period in December 2014 and expires in January 2019. We anticipate continuing to purchase and sell commodities with Phillips 66 and CPChem in the ordinary course of business.

**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS — Continued**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

***Spectra Energy***

*Commodity Transactions* — We sell a portion of our residue gas and NGLs to, purchase natural gas and other NGL products from, and provide gathering, transportation and other services to Spectra Energy. Management anticipates continuing to purchase and sell commodities and provide services to Spectra Energy in the ordinary course of business.

***DCP Partners***

We have entered into a services agreement, as amended, or the Services Agreement, with DCP Partners. Under the Services Agreement, DCP Partners is required to reimburse us for salaries of operating personnel and employee benefits, as well as capital expenditures, maintenance and repair costs, taxes and other direct costs incurred by us on behalf of DCP Partners. DCP Partners also pays us an annual fee under the Services Agreement for centralized corporate functions performed by us on behalf of DCP Partners. Except with respect to the annual fee, there is no limit on the reimbursements DCP Partners makes to us under the Services Agreement for other expenses and expenditures incurred or payments made by us on behalf of DCP Partners. Reimbursements received from DCP Partners have been eliminated in consolidation. In the event DCP Partners acquires assets or its business otherwise expands, the annual fee under the Services Agreement is subject to adjustment based on the nature and extent of general and administrative services performed by us on DCP Partners' behalf, as well as an annual adjustment based on the changes to the Consumer Price Index.

On February 23, 2015, the annual fee payable under the Services Agreement was increased by approximately \$25 million to \$71 million, following approval of the increase by the special committee of DCP Partners' Board of Directors. DCP Partners' growth, both from organic growth and acquisitions, has resulted in DCP Partners becoming a much larger portion of our business. Additionally, DCP Partners' expansion into downstream logistics has required us to expand our capabilities and provide DCP Partners with a broader range of services than what was previously provided. As a result, we initiated a comprehensive review of our costs and the methodology for allocating general and administrative services. The result of this review reflects the level and cost of general and administrative services we provide to DCP Partners as the operator of its assets. The annual fee was effective starting January 1, 2015.

We have previously entered into derivative transactions directly with DCP Partners as a result of dropdown transactions whereby we were the counterparty. In March 2015, we novated these fixed price commodity derivatives for approximately \$141 million, and DCP Partners' counterparty is now one of the financial institutions associated with DCP Partners' credit facility. As we are no longer the counterparty in these fixed price commodity derivatives, DCP Partners' position no longer eliminates in our condensed consolidated financial statements.

***Unconsolidated Affiliates***

In February 2015, DCP Partners and Williams Partners L.P. announced that the new extended Discovery natural gas gathering pipeline system is now flowing natural gas. The Keathley Canyon Connector, a 20-inch diameter, 209-mile subsea natural gas gathering pipeline is capable of gathering more than 400 MMcf/d of natural gas, and originates in the southeast portion of the Keathley Canyon protraction area of the Gulf of Mexico, and terminates into Discovery's 30-inch diameter mainline near South Timbalier Block 283.

We, along with other third party shippers, entered into 15-year transportation agreements with DCP Sand Hills Pipeline, LLC, or Sand Hills, DCP Southern Hills Pipeline, LLC, or Southern Hills, Front Range Pipeline LLC, or Front Range, and Texas Express Pipeline LLC, or Texas Express. Under the terms of these 15-year agreements, which commenced at each of the pipelines' respective in-service dates, we have committed to transport minimum throughput volumes at rates defined in each of the pipelines' respective tariffs.

Under the terms of the Sand Hills LLC Agreement and the Southern Hills LLC Agreement, or the Sand Hills and Southern Hills LLC Agreements, Sand Hills and Southern Hills are required to reimburse us for any direct costs or expenses (other than general and administration services) which we incur on behalf of Sand Hills and Southern Hills. Additionally, Sand Hills and Southern Hills pay us an annual service fee totaling \$10 million, for centralized corporate functions provided by us as operator of Sand Hills and Southern Hills, including legal, accounting, cash management, insurance administration and claims processing, risk management, health, safety and environmental, information technology, human resources, credit, payroll, taxes and engineering. Except with respect to the annual service fee, there is no limit on the reimbursements Sand Hills and Southern Hills make to us under the Sand Hills and Southern Hills LLC Agreements for other expenses and expenditures which we incur on behalf of Sand Hills or Southern Hills.

**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS — Continued**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

**Competition**

Our related parties or affiliates, including DCP Partners, Phillips 66 and Spectra Energy, are not restricted, under either the LLC Agreement or the Services Agreement, from competing with us. Our related parties or affiliates, including DCP Partners, Phillips 66 and Spectra Energy, may acquire, construct or dispose of additional midstream energy or other assets in the future without any obligation to offer us the opportunity to purchase or construct those assets.

**Transactions with other unconsolidated affiliates**

We sell a portion of our residue gas and NGLs to, purchase natural gas and other NGL products from, and provide gathering and transportation services to unconsolidated affiliates. We anticipate continuing to purchase and sell commodities and provide services to unconsolidated affiliates in the ordinary course of business.

The following table summarizes our transactions with related parties and affiliates:

	<b>Three Months Ended March 31,</b>	
	<b>2015</b>	<b>2014</b>
	<b>(millions)</b>	
Phillips 66 (including CPChem):		
Sales of natural gas and NGL products to affiliates .....	\$ 197	\$ 574
Purchases of natural gas and NGL products from affiliates .....	\$ —	\$ 4

Long-term assets .....	5,250	5,125
Current liabilities .....	(183)	(192)
Long-term liabilities.....	(230)	(165)
Net assets .....	\$ 5,041	\$ 5,038

- (a) In accordance with the Panola joint venture agreement, earnings do not accrue to our interest until the expansion of the pipeline is complete. Accordingly, DCP Partners will not include activity related to Panola in the above tables until the period in which the expansion is complete and earnings accrue to DCP Partners' interest.

**9. Fair Value Measurement**

*Determination of Fair Value*

Below is a general description of our valuation methodologies for derivative financial assets and liabilities which are measured at fair value. Fair values are generally based upon quoted market prices or prices obtained through external sources, where available. If listed market prices or quotes are not available, we determine fair value based upon a market quote, adjusted by other market-based or independently sourced market data such as historical commodity volatilities, crude oil future yield curves, and/or counterparty specific considerations. These adjustments result in a fair value for each asset or liability under an “exit price” methodology, in line with how we believe a marketplace participant would value that asset or liability. Fair values are adjusted to reflect the credit risk inherent in the transaction as well as the potential impact of liquidating open positions in an orderly manner over a reasonable time period under current conditions. These adjustments may include amounts to reflect counterparty credit quality, the effect of our own creditworthiness, the time value of money and/or the liquidity of the market.

- Counterparty credit valuation adjustments are necessary when the market price of an instrument is not indicative of the fair value as a result of the credit quality of the counterparty. Generally, market quotes assume that all counterparties have near zero, or low, default rates and have equal credit quality. Therefore, an adjustment may be necessary to reflect the credit quality of a specific counterparty to determine the fair value of the instrument. We record counterparty credit valuation adjustments on all derivatives that are in a net asset position as of the measurement date in accordance with our established counterparty credit policy, which takes into account any collateral margin that a counterparty may have posted with us as well as any letters of credit that they have provided.
- Entity valuation adjustments are necessary to reflect the effect of our own credit quality on the fair value of our net liability positions with each counterparty. This adjustment takes into account any credit enhancements, such as collateral margin we may have posted with a counterparty, as well as any letters of credit that we have provided. The methodology to determine this adjustment is consistent with how we evaluate counterparty credit risk, taking into account our own credit rating, current credit spreads, as well as any change in such spreads since the last measurement date.
- Liquidity valuation adjustments are necessary when we are not able to observe a recent market price for financial instruments that trade in less active markets for the fair value to reflect the cost of exiting the position. Exchange traded contracts are valued at market value without making any additional valuation adjustments and, therefore, no liquidity reserve is applied. For contracts other than exchange traded instruments, we mark our positions to the midpoint of the bid/ask spread, and record a liquidity reserve based upon our total net position. We believe that such practice results in the most reliable fair value measurement as viewed by a market participant.

We manage our derivative instruments on a portfolio basis and the valuation adjustments described above are calculated on this basis. We believe that the portfolio level approach represents the highest and best use for these assets as there are benefits inherent in naturally offsetting positions within the portfolio at any given time, and this approach is consistent with how a market participant would view and value the assets and liabilities. Although we take a portfolio approach to managing these assets/liabilities, in order to reflect the fair value of any one individual contract within the portfolio, we allocate all valuation adjustments down to the contract level, to the extent deemed necessary, based upon either the notional contract volume, or the contract value, whichever is more applicable.

The methods described above may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. While we believe that our valuation methods are appropriate and consistent with other market participants, we recognize that the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date. We review our fair value policies on a regular basis taking into consideration changes in the marketplace and, if necessary, will adjust our policies accordingly. See Note 11, Risk Management and Hedging Activities, Credit Risk and Financial Instruments.

***Valuation Hierarchy***

Our fair value measurements are grouped into a three-level valuation hierarchy. The valuation hierarchy is based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date. The three levels are defined as follows:

- Level 1 — inputs are unadjusted quoted prices for *identical* assets or liabilities in active markets.
- Level 2 — inputs include quoted prices for *similar* assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument.
- Level 3 — inputs are unobservable and considered significant to the fair value measurement.

A financial instrument's categorization within the hierarchy is based upon level of judgment involved in the most significant input in the determination of the instrument's fair value. Following is a description of the valuation methodologies used as well as the general classification of such instruments pursuant to the hierarchy.

***Commodity Derivative Assets and Liabilities***

We enter into a variety of derivative financial instruments, which may include exchange traded instruments (such as New York Mercantile Exchange, or NYMEX, crude oil or natural gas futures) or over-the-counter, or OTC, instruments (such as natural gas contracts, costless commodity collars, crude oil or NGL swaps). The exchange traded instruments are generally executed on the NYMEX exchange with a highly rated broker dealer serving as the clearinghouse for individual transactions.

Our activities expose us to varying degrees of commodity price risk. To mitigate a portion of this risk and to manage commodity price risk related primarily to owned natural gas storage and pipeline assets, we engage in natural gas asset based trading and marketing, and we may enter into natural gas and crude oil derivatives to lock in a specific margin when market conditions are favorable. A portion of this may be accomplished through the use of exchange traded derivative contracts. Such instruments are generally classified as Level 1 since the value is equal to the quoted market price of the exchange traded instrument as of our balance sheet date, and no adjustments are required. Depending upon market conditions and our strategy we may enter into exchange traded derivative positions with a significant time horizon to maturity. Although such instruments are exchange traded, market prices may only be readily observable for a portion of the duration of the instrument. In order to calculate the fair value of these instruments, readily observable market information is utilized to the extent it is available; however, in the event that readily observable market data is not available, we may interpolate or extrapolate based upon observable data. In instances where we utilize an interpolated or extrapolated value, and it is considered significant to the valuation of the contract as a whole, we would classify the instrument within Level 3.

We also engage in the business of trading energy related products and services, which exposes us to market variables and commodity price risk. We may enter into physical contracts or financial instruments with the objective of realizing a positive margin from the purchase and sale of these commodity-based instruments. We may enter into derivative instruments for NGLs or other energy related products, primarily using the OTC derivative instrument markets, which are not as active and liquid as exchange traded instruments. Market quotes for such contracts may only be available for short dated positions (up to six months), and an active market itself may not exist beyond such time horizon. Contracts entered into with a relatively short time horizon for which prices are readily observable in the OTC market are generally classified within Level 2. Contracts with a longer time horizon, for which we internally generate a forward curve to value such instruments, are generally classified within Level 3. The internally generated curve may utilize a variety of assumptions including, but not limited to, data obtained from third-party pricing services, historical and future expected relationship of NGL prices to crude oil prices, the knowledge of expected supply sources coming on line, expected weather trends within certain regions of the United States, and the future expected demand for NGLs.

Each instrument is assigned to a level within the hierarchy at the end of each financial quarter depending upon the extent to which the valuation inputs are observable. Generally, an instrument will move toward a level within the hierarchy that requires a lower degree of judgment as the time to maturity approaches, and as the markets in which the asset trades will likely become more liquid and prices more readily available in the market, thus reducing the need to rely upon our internally developed assumptions. However, the level of a given instrument may change, in either direction, depending upon market conditions and the availability of market observable data.

**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

***Interest Rate Derivative Assets and Liabilities***

We periodically use interest rate swap agreements as part of our overall capital strategy. These instruments effectively exchange a portion of our fixed-rate debt for floating rate debt or floating rate debt for fixed-rate debt. The swaps are generally priced based upon a London Interbank Offered Rate, or LIBOR, instrument with similar duration, adjusted by the credit spread between our company and the LIBOR instrument. Given that a portion of the swap value is derived from the credit spread, which may be observed by comparing similar assets in the market, these instruments are classified within Level 2. Default risk on either side of the swap transaction is also considered in the valuation. We record counterparty credit and entity valuation adjustments in the valuation of interest rate swaps; however, these reserves are not considered to be a significant input to the overall valuation.

***Benefits***

We offer certain eligible executives the opportunity to participate in DCP Midstream LP's Non-Qualified Executive Deferred Compensation Plan, or the EDC Plan. All amounts contributed to and earned by the EDC Plan's investments are held in a trust account, which is managed by a third-party service provider. The trust account is invested in short-term money market securities and mutual funds. These investments are recorded at fair value, with any changes in fair value being recorded as a gain or loss in the condensed consolidated statements of operations. Given that the value of the short-term money market securities and mutual funds are publicly traded and for which market prices are readily available, these investments are classified within Level 1.

***Nonfinancial Assets and Liabilities***

We utilize fair value to perform impairment tests as required on our property, plant and equipment; goodwill; and long-lived intangible assets. Assets and liabilities acquired in third party business combinations are recorded at their fair value as of the date of acquisition. The inputs used to determine such fair value are primarily based upon internally developed cash flow models and would generally be classified within Level 3 in the event that we were required to measure and record such assets at fair value within our condensed consolidated financial statements. Additionally, we use fair value to determine the inception value of our asset retirement obligations. The inputs used to determine such fair value are primarily based upon costs incurred historically for similar work, as well as estimates from independent third parties for costs that would be incurred to restore leased property to the contractually stipulated condition, and would generally be classified within Level 3.

The following table presents the financial instruments carried at fair value on a recurring basis, by condensed consolidated balance sheet caption and by valuation hierarchy, as described above:

	March 31, 2015				December 31, 2014			
	Level 1	Level 2	Level 3	Total Carrying Value	Level 1	Level 2	Level 3	Total Carrying Value
	(millions)							
Current assets:								
Commodity derivatives (a) .....	\$ 37	\$ 84	\$ 134	\$ 255	\$ 33	\$ 108	\$ 23	\$ 164
Interest rate derivatives (a) .....	\$ —	\$ —	\$ —	\$ —	\$ —	\$ 1	\$ —	\$ 1
Short-term investments (b) .....	\$ 35	\$ —	\$ —	\$ 35	\$ 25	\$ —	\$ —	\$ 25
Long-term assets:								
Commodity derivatives (c) .....	\$ 2	\$ 20	\$ 2	\$ 24	\$ 1	\$ 19	\$ 3	\$ 23
Mutual funds (d) .....	\$ 14	\$ —	\$ —	\$ 14	\$ 14	\$ —	\$ —	\$ 14
Current liabilities (e):								
Commodity derivatives .....	\$ (25)	\$ (39)	\$ (36)	\$ (100)	\$ (22)	\$ (57)	\$ (45)	\$ (124)
Long-term liabilities (f):								
Commodity derivatives .....	\$ (2)	\$ (1)	\$ (9)	\$ (12)	\$ (2)	\$ (1)	\$ (12)	\$ (15)

- (a) Included in current unrealized gains on derivative instruments in our condensed consolidated balance sheets.
- (b) Includes short-term money market securities included in cash and cash equivalents in our condensed consolidated balance sheets.
- (c) Included in long-term unrealized gains on derivative instruments in our condensed consolidated balance sheets.
- (d) Included in other long-term assets in our condensed consolidated balance sheets.
- (e) Included in current unrealized losses on derivative instruments in our condensed consolidated balance sheets.
- (f) Included in long-term unrealized losses on derivative instruments in our condensed consolidated balance sheets.

***Changes in Levels 1 and 2 Fair Value Measurements***

The determination to classify a financial instrument within Level 1 or Level 2 is based upon the availability of quoted prices for identical or similar assets and liabilities in active markets. Depending upon the information readily observable in the market, and/or the use of identical or similar quoted prices, which are significant to the overall valuation, the classification of any individual financial instrument may differ from one measurement date to the next. To qualify as a transfer, the asset or liability must have existed in the previous reporting period and moved into a different level during the current period. Amounts transferred in and out of Level 1 and Level 2 are reflected at fair value as of the end of the period. During the three months ended March 31, 2015 and 2014, there were no transfers between Level 1 and Level 2 of the fair value hierarchy.

**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

**Changes in Level 3 Fair Value Measurements**

The tables below illustrate a rollforward of the amounts included in our condensed consolidated balance sheets for derivative financial instruments that we have classified within Level 3. Since financial instruments classified as Level 3 typically include a combination of observable components (that is, components that are actively quoted and can be validated to external sources) and unobservable components, the gains and losses in the table below may include changes in fair value due in part to observable market factors, or changes to our assumptions on the unobservable components. Depending upon the information readily observable in the market, and/or the use of unobservable inputs, which are significant to the overall valuation, the classification of any individual financial instrument may differ from one measurement date to the next. The significant unobservable inputs used in determining fair value include adjustments by other market-based or independently sourced market data such as historical commodity volatilities, crude oil future yield curves, and/or counterparty specific considerations. In the event that there is a movement to/from the classification of an instrument as Level 3, we have reflected such items in the table below within the “Transfers into Level 3” and “Transfers out of Level 3” captions.

We manage our overall risk at the portfolio level and in the execution of our strategy, we may use a combination of financial instruments, which may be classified within any level. Since Level 1 and Level 2 risk management instruments are not included in the rollforwards below, the gains or losses in the tables do not reflect the effect of our total risk management activities.

	<b>Commodity Derivative Instruments</b>

***Quantitative Information and Fair Value Sensitivities Related to Level 3 Unobservable Inputs***

We utilize the market approach to measure the fair value of our commodity contracts. The significant unobservable inputs used in this approach are longer dated price quotes. Our sensitivity to these longer dated forward curve prices are presented in the table below. Significant changes in any of those inputs in isolation would result in significantly different fair value measurements, depending on our short or long position in these contracts.

<u>Product Group</u>	<u>Fair Value (millions)</u>	<u>Forward Curve Range</u>	
<b><u>Assets:</u></b>			
NGLs .....	\$ 136	\$0.17 – \$1.14	Per gallon
<b><u>Liabilities:</u></b>			
NGLs .....	\$ (45)	\$0.17 – \$1.14	Per gallon

***Estimated Fair Value of Financial Instruments***

Valuation of a contract's fair value is validated by an internal group independent of the marketing group. While common industry practices are used to develop valuation techniques, changes in pricing methodologies or the underlying assumptions could result in significantly different fair values and income recognition. When available, quoted market prices or prices obtained through external sources are used to determine a contract's fair value. For contracts with a delivery location or duration for which quoted market prices are not available, fair value is determined based on pricing models developed primarily from historical and expected relationship with quoted market prices.

Values are adjusted to reflect the credit risk inherent in the transaction as well as the potential impact of liquidating open positions in an orderly manner over a reasonable time period under current conditions. Changes in market prices and management estimates directly affect the estimated fair value of these contracts. Accordingly, it is reasonably possible that such estimates may change in the near term.

The fair value of our interest rate swaps, if applicable, and commodity non-trading derivatives are based on prices supported by quoted market prices and other external sources and prices based on models and other valuation methods. The "prices supported by quoted market prices and other external sources" category includes our interest rate swaps, if applicable, our NGL and crude oil swaps and our NYMEX positions in natural gas. In addition, this category includes our forward positions in natural gas for which our forward price curves are obtained from a third-party pricing service and then validated through an internal process which includes the use of independent broker quotes. This category also includes our forward positions in NGLs at points for which over-the-counter, or OTC, broker quotes for similar assets or liabilities are available for the full term of the instrument. This category also includes "strip" transactions whose pricing inputs are directly or indirectly observable from external sources and then modeled to daily or monthly prices as appropriate. The "prices based on models and other valuation methods" category includes the value of transactions for which inputs to the fair value of the instrument are unobservable in the marketplace and are considered significant to the overall fair value of the instrument. The fair value of these instruments may be based upon an internally developed price curve, which was constructed as a result of the long dated nature of the transaction or the illiquidity of the specific market point.

We have determined fair value amounts using available market information and appropriate valuation methodologies. However, considerable judgment is required in interpreting market data to develop the estimates of fair value. Accordingly, the estimates presented herein are not necessarily indicative of the amounts that we could realize in a current market exchange. The use of different market assumptions and/or estimation methods may have a material effect on the estimated fair value amounts.

The fair value of accounts receivable, accounts payable and short-term borrowings are not materially different from their carrying amounts because of the short-term nature of these instruments or the stated rates approximating market rates. Derivative instruments are carried at fair value. We determine the fair value of our variable rate debt based upon the discounted present value of expected future cash flows, taking into account the difference between the contractual borrowing spread and the spread for similar credit facilities available in the marketplace. We determine the fair value of our fixed-rate debt based on quotes obtained from bond dealers. We classify the fair value of our outstanding debt balances within Level 2 of the fair value hierarchy. As of March 31, 2015, the carrying and fair value of our long-term debt, including current maturities of long-term debt, was \$7,002 million and \$6,653 million, respectively. As of December 31, 2014, the carrying and fair value of our long-term debt was \$5,683 million and \$5,951 million, respectively.

- (a) Prior to December 31, 2014, \$50 million of debt associated with each of these note issuances was swapped to a floating rate obligation. These interest rate swap agreements were terminated in January 2015, and the remaining long-term fair value of approximately \$1 million related to these swaps will be amortized as a reduction of interest expense through March 2019 and March 2020, respectively, the original maturity date of the debt.
- (b) In December 2008, the swaps associated with this debt were terminated. The remaining long-term fair value of approximately \$27 million related to the swaps is being amortized as a reduction to interest expense through August 2030, the original maturity date of the debt.

*DCP Midstream's Debt Securities* — The DCP Midstream senior debt securities mature and become payable on the respective due dates, and are not subject to any sinking fund provisions. The DCP Midstream senior debt securities are senior unsecured obligations, and are redeemable at a premium at our option. The underwriters' fees and related expenses are deferred in other long-term assets in the condensed consolidated balance sheets and will be amortized over the term of the notes.

*DCP Midstream's Commercial Paper Program* — We had a commercial paper program, or the DCP Midstream Commercial Paper Program, under which we issued unsecured commercial paper notes. As of December 31, 2014, we had \$1,012 million of commercial paper outstanding, which was included in short-term borrowings in the condensed consolidated balance sheets. In the first quarter of 2015, our credit rating was lowered below investment grade. As a result of this ratings action, we no longer have the DCP Midstream Commercial Paper Program as of March 31, 2015. Our borrowings under the DCP Midstream Commercial Paper Program have been replaced with liquidity and borrowings under the DCP Midstream Amended and Restated Revolving Credit Agreement.

**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS — Continued**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

*DCP Midstream's Credit Facilities with Financial Institutions* — In March 2015, we entered into a first amendment of the DCP Midstream Amended and Restated Revolving Credit Agreement, which reduced the total borrowing capacity of the facility from \$2 billion to \$1.8 billion and revised the maturity date of the facility from May 2019 to March 2017. Certain of our subsidiaries, other than DCP Partners, will provide guarantees of borrowings under this facility. In addition, borrowings under this facility will be secured with a pledge of our limited partner and general partner ownership in DCP Partners as collateral. None of our physical assets are pledged as collateral for borrowings under this facility. Along with other restrictions, the terms of this facility also restrict the payment of dividends or distributions to Phillips 66 and Spectra. The DCP Midstream Amended and Restated Revolving Credit Agreement may be used to support our capital expansion program, for working capital requirements and other general corporate purposes, including acquisitions, as well as for letters of credit. As of March 31, 2015, we had \$1,319 million outstanding under the DCP Midstream Amended and Restated Revolving Credit Agreement.

As of March 31, 2015 and December 31, 2014, we had \$6 million in letters of credit outstanding. As of March 31, 2015, the available capacity under the DCP Midstream Amended and Restated Revolving Credit Agreement was \$475 million, net of letters of credit, all of which was available for general working capital purposes. Our borrowing capacity may be limited by financial covenant requirements set forth in the DCP Midstream Amended and Restated Revolving Credit Agreement. Except in the case of default, amounts borrowed under the DCP Midstream Amended and Restated Revolving Credit Agreement will not become due prior to the March 2017 maturity date.

Indebtedness under the DCP Midstream Amended and Restated Revolving Credit Agreement bears interest at either: (1) LIBOR, plus an applicable margin of 2.50%; or (2) (a) the base rate which shall be the higher of Wells Fargo Bank N.A.'s prime rate, the Federal Funds rate plus 0.50% or the LIBOR Market Index rate plus 1% plus (b) an applicable margin of 1.50%. The DCP Midstream Amended and Restated Revolving Credit Agreement incurs an annual facility fee of 0.50%. This fee is paid on drawn and undrawn portions of the DCP Midstream Amended and Restated Revolving Credit Agreement.

The DCP Midstream Amended and Restated Revolving Credit Agreement requires us to maintain a secured leverage ratio (the ratio of secured indebtedness to consolidated EBITDA as defined) of not more than 3.25 to 1.0. Beginning with the fiscal quarter ending December 31, 2015, we must also maintain a consolidated leverage ratio (the ratio of consolidated indebtedness to consolidated EBITDA as defined) of not more than 5.0 to 1.0.

*DCP Partners' Commercial Paper Program* — DCP Partners had a commercial paper program, or the DCP Partners Commercial Paper Program, under which DCP Partners issued unsecured commercial paper notes. In the first quarter of 2015, DCP Partners' credit rating was lowered below investment grade. As a result of this ratings action, DCP Partners no longer has the DCP Partners Commercial Paper Program as of March 31, 2015. Available liquidity under the DCP Partners Commercial Paper Program has been replaced with the DCP Partners Amended and Restated Credit Agreement.

*DCP Partners' Credit Facilities with Financial Institutions* — In May 2014, DCP Partners entered into the DCP Partners Amended and Restated Credit Agreement. The DCP Partners Amended and Restated Credit Agreement has a total borrowing capacity of \$1.25 billion and will be used for working capital requirements and other general partnership purposes including acquisitions. As of March 31, 2015 and December 31, 2014, DCP Partners had \$1 million of letters of credit issued and outstanding under the DCP Partners Amended and Restated Credit Agreement and the DCP Partners Credit Agreement. As of March 31, 2015, the unused capacity under the DCP Partners Amended and Restated Credit Agreement was \$1,249 million, which is net of letters of credit. DCP Partners' borrowing capacity may be limited by financial covenant requirements set forth in the DCP Partners Amended and Restated Credit Agreement. Except in the case of default, amounts borrowed under the DCP Partners Amended and Restated Credit Agreement will not become due prior to the May 2019 maturity date.

Indebtedness under the DCP Partners Amended and Restated Credit Agreement bears interest at either: (1) LIBOR, plus an applicable margin of 1.45% based on DCP Partners' current credit rating; or (2) (a) the base rate which shall be the higher of Wells Fargo Bank N.A.'s prime rate, the Federal Funds rate plus 0.50% or the LIBOR Market Index rate plus 1%, plus (b) an applicable margin of 0.45% based on DCP Partners' current credit rating. The DCP Partners Amended and Restated Credit Agreement incurs an annual facility fee of 0.30% based on DCP Partners' current credit rating. This fee is paid on drawn and undrawn portions of the DCP Partners Amended and Restated Credit Agreement.

**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS — Continued**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

The DCP Partners Amended and Restated Credit Agreement requires DCP Partners to maintain a leverage ratio (the ratio of DCP Partners' consolidated indebtedness to its consolidated EBITDA, in each case as defined) of not more than 5.0 to 1.0, and following consummation of qualifying acquisitions, not more than 5.5 to 1.0, on a temporary basis for three consecutive quarters, including the quarter in which such acquisition is consummated. Further, DCP Partners' cost of borrowing under the DCP Partners Amended and Restated Credit Agreement is determined by a ratings based pricing grid.

DCP Partners' Debt Securities — In March 2014, DCP Partners issued \$325 million of 2.70% five-year Senior Notes due April 2019 and \$400 million of 5.60% 30-year Senior Notes, due April 2044. DCP Partners received proceeds of \$320 million and \$392 million, respectively, net of underwriters' fees, related expenses and unamortized discounts, which were used to pay a portion of the consideration for the contribution and acquisition of: (i) a 33.33% interest in each of the Sand Hills and Southern Hills pipeline entities; (ii) the remaining 20% interest in the DCP SC Texas GP, or the Eagle Ford system; (iii) a 35 MMcf/d cryogenic natural gas processing plant located in Weld County, Colorado, or the Lucerne 1 plant; and (iv) a 200 MMcf/d cryogenic natural gas processing plant also in Weld County, Colorado, which is currently under construction, or the Lucerne 2 plant. Interest on the notes is paid semiannually on April 1 and October 1 of each year, commencing on October 1, 2014. The notes will mature in April 2019 and April 2044, respectively, unless redeemed prior to maturity.

DCP Partners' debt securities are senior unsecured obligations, ranking equally in right of payment with other unsecured indebtedness, including indebtedness under the DCP Partners Amended and Restated Credit Agreement. DCP Partners is not required to make mandatory redemption or sinking fund payments with respect to any of these notes, and they are redeemable at a premium at DCP Partners' option. The underwriters' fees and related expenses are deferred in other long-term assets in our condensed consolidated balance sheets and will be amortized over the term of the notes.

Other Financing — During the three months ended March 31, 2015, DCP Partners issued 788,033 of its common units pursuant to its 2014 equity distribution agreement and received proceeds of \$31 million, net of commissions and accrued offering costs of less than \$1 million, which were used to finance growth opportunities and for general partnership purposes. As of March 31, 2015, approximately \$349 million remained available for sale pursuant to DCP Partners' 2014 equity distribution agreement.

In March 2014, DCP Partners issued 14,375,000 of its common units to the public at \$48.90 per unit. DCP Partners received proceeds of \$677 million, net of offering costs.

## **11. Risk Management and Hedging Activities, Credit Risk and Financial Instruments**

Our day-to-day operations expose us to a variety of risks including but not limited to changes in the prices of commodities that we buy or sell, changes in interest rates, and the creditworthiness of each of our counterparties. We manage certain of these exposures with either physical or financial transactions. We have established a comprehensive risk management policy, or Risk Management Policy, and a risk management committee, or the Risk Management Committee, to monitor and manage market risks associated with commodity prices and counterparty credit. Our Risk Management Committee is composed of senior executives who receive regular briefings on positions and exposures, credit exposures and overall risk management in the context of market activities. The Risk Management Committee is responsible for the overall management of credit risk and commodity price risk, including monitoring exposure limits. The following describes each of the risks that we manage.

### **Commodity Price Risk**

Our portfolio of commodity derivative activity is primarily accounted for using the mark-to-market method of accounting; however, depending upon our risk profile and objectives, in certain limited cases, we may execute transactions that qualify for the hedge method of accounting. The risks, strategies and instruments used to mitigate such risks, as well as the method of accounting are discussed and summarized below.

**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS — Continued**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

***Natural Gas Asset Based Trading and Marketing***

Our natural gas storage and pipeline assets are exposed to certain risks including changes in commodity prices. We manage commodity price risk related to our natural gas storage and pipeline assets through our commodity derivative program. The commercial activities related to our natural gas storage and pipeline assets primarily consist of the purchase and sale of gas and associated time spreads and basis spreads.

A time spread transaction is executed by establishing a long gas position at one point in time and establishing an equal short gas position at a different point in time. Time spread transactions allow us to lock in a margin supported by the injection, withdrawal, and storage capacity of our natural gas storage assets. We may execute basis spread transactions to mitigate the risk of sale and purchase price differentials across our system. A basis spread transaction allows us to lock in a margin on our physical purchases and sales of gas, including injections and withdrawals from storage. We typically use swaps to execute these transactions, which are not designated as hedging instruments and are recorded at fair value with changes in fair value recorded in the current period condensed consolidated statements of operations. While gas held in our storage locations is recorded at the lower of average cost or market, the derivative instruments that are used to manage our storage facilities are recorded at fair value and any changes in fair value are currently recorded in our condensed consolidated statements of operations. Even though we may have economically hedged our exposure and locked in a future margin, the use of lower-of-cost-or-market accounting for our physical inventory and the use of mark-to-market accounting for our derivative instruments may subject our earnings to market volatility.

***DCP Partners Commodity Cash Flow Hedges***

In order for our storage facilities to remain operational, a minimum level of base gas must be maintained in each storage cavern, which is capitalized on our condensed consolidated balance sheets as a component of property, plant and equipment, net. During construction or expansion of DCP Partners' storage caverns, DCP Partners may execute a series of derivative financial instruments to mitigate a portion of the risk associated with the forecasted purchase of natural gas when DCP Partners brings the storage caverns to operation. These derivative financial instruments may be designated as cash flow hedges. While the cash paid upon settlement of these hedges economically fixes the cash required to purchase base gas, the deferred losses or gains would remain in accumulated other comprehensive income, or AOCI, until the cavern is emptied and the base gas is sold. The balance in AOCI of DCP Partners' previously settled base gas cash flow hedges was in a loss position of \$6 million as of March 31, 2015.

***NGL Proprietary Trading***

Our NGL proprietary trading activity includes trading energy related products and services. We undertake these activities through the use of fixed forward sales and purchases, basis and spread trades, storage opportunities, put/call options, term contracts and spot market trading. These energy trading operations are exposed to market variables and commodity price risk with respect to these products and services, and these operations may enter into physical contracts and financial instruments with the objective of realizing a positive margin from the purchase and sale of commodity-based instruments. These physical and financial instruments are not designated as hedging instruments and are recorded at fair value with changes in fair value recorded in the current period condensed consolidated statements of operations.

We employ established risk limits, policies and procedures to manage risks associated with our natural gas asset based trading and marketing and NGL proprietary trading.

***Commodity Cash Flow Protection Activities at DCP Partners***

DCP Partners is exposed to the impact of market fluctuations in the prices of natural gas, NGLs and condensate as a result of its gathering, processing, sales and storage activities. For gathering, processing and storage services, DCP Partners may receive cash or commodities as payment for these services, depending on the contract type. DCP Partners enters into derivative financial instruments to mitigate a portion of the risk of weakening natural gas, NGL and condensate prices associated with its gathering, processing and sales activities, thereby stabilizing its cash flows. DCP Partners has mitigated a portion of its expected commodity cash flow risk associated with its gathering, processing and sales activities through 2017 with commodity derivative instruments. DCP Partners' commodity derivative instruments used for its hedging program are a combination of direct NGL product, crude oil and natural gas hedges. Due to the limited liquidity and tenor of the NGL derivative market, DCP Partners has used crude oil swaps and costless commodity collars to mitigate a portion of its commodity price risk exposure for NGLs. Historically, prices of NGLs have generally been related to crude oil prices; however, there are periods of time when NGL pricing may be at a greater discount to crude oil, resulting in additional exposure to NGL commodity prices. The relationship of NGLs to crude oil continues to be lower than historical

**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS — Continued**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

relationships. Prior to March 2015, a significant amount of DCP Partners' NGL hedges through March 2016 were direct product hedges with us. As a result of our novating these direct product commodity positions to a third party in March 2015, these positions no longer eliminate in our condensed consolidated financial statements. When its crude oil swaps become short-term in nature, DCP Partners has periodically converted certain crude oil derivatives to NGL derivatives by entering into offsetting crude oil swaps while adding NGL swaps. DCP Partners' crude oil and NGL transactions are primarily accomplished through the use of forward contracts that effectively exchange DCP Partners' floating price risk for a fixed price. DCP Partners also utilizes crude oil costless commodity collars that minimize its floating price risk by establishing a fixed price floor and a fixed price ceiling. However, the type of instrument that DCP Partners uses to mitigate a portion of its risk may vary depending on DCP Partners' risk management objective. These transactions are not designated as hedging instruments for accounting purposes and the change in fair value is reflected in the current period within our condensed consolidated statements of operations as trading and marketing gains, net.

### **Interest Rate Risk**

We enter into debt arrangements that have either fixed or floating rates, therefore we are exposed to market risks related to changes in interest rates. We periodically use interest rate swaps to convert our floating rate debt to fixed-rate debt or to convert our fixed-rate debt to floating rate debt. Our primary goals include: (1) maintaining an appropriate ratio of fixed-rate debt to floating-rate debt; (2) reducing volatility of earnings resulting from interest rate fluctuations; and (3) locking in attractive interest rates.

Prior to June 30, 2014, DCP Partners had interest rate swap agreements with notional values totaling \$150 million, which were accounted for under the mark-to-market method of accounting and repriced prospectively approximately every 30 days. Under the terms of the interest rate swap agreements, DCP Partners paid fixed rates ranging from 2.94% to 2.99%, and received interest payments based on the one-month LIBOR. These interest rate swap agreements settled in June 2014. Prior to August 2013, these interest rate swaps were designated as cash flow hedges whereby the effective portions of changes in fair value were recognized in AOCI in the condensed consolidated balance sheets. In March 2014, DCP Partners paid down a portion of the balance outstanding under the DCP Partners Commercial Paper Program and reclassified the remaining loss of \$1 million in AOCI into earnings as interest expense, net.

In conjunction with the issuance of DCP Partners' 4.95% Senior Notes in March 2012, DCP Partners entered into forward-starting interest rate swap agreements to reduce its exposure to market rate fluctuations prior to issuance. These derivative financial instruments were designated as cash flow hedges. While the cash paid upon settlement of these hedges economically fixed the rate DCP Partners would pay on a portion of its 4.95% Senior Notes, the deferred loss in AOCI will be amortized into interest expense through the maturity of the notes in 2022. The balance in AOCI of these cash flow hedges was in a loss position of \$3 million as of March 31, 2015.

In July 2014, we entered into an interest rate swap agreement to convert \$50 million of fixed-rate debt securities issued in February 2009 to floating rate debt. Additionally, in July 2014, we entered into an interest rate swap agreement to convert \$50 million of fixed-rate debt securities issued in March 2010, to floating rate debt. The interest rate fair value hedges associated with each of these interest rate swap agreements are at a floating rate based on one month LIBOR, which resets monthly and are paid semi-annually through the expiration of the securities in March 2019 and March 2020, respectively. These swap agreements meet conditions that permit the assumption of no ineffectiveness. As such, for the life of the swap agreements no ineffectiveness will be recognized. These interest rate swap agreements were terminated in January 2015, and the remaining long-term fair value relative to these interest rate swap agreements will be reclassified to interest expense, net through March 2019 and March 2020, respectively, the original maturity date of the debt, as the underlying transactions impact earnings.

We previously had interest rate cash flow hedges and fair value hedges in place that were terminated in 2000 and 2008, respectively. As a result, the remaining net loss deferred in AOCI relative to these cash flow hedges and the remaining net loss included in long-term debt relative to these fair value hedges will be reclassified to interest expense, net through August 2030, the original maturity date of the debt, as the underlying transactions impact earnings.

### **Credit Risk**

Our principal customers range from large, natural gas marketers to industrial end-users for our natural gas products and services, as well as large multi-national petrochemical and refining companies, to small regional propane distributors for our NGL products and services. Substantially all of our natural gas and NGL sales are made at market-based prices. Prior to December 31, 2014, approximately 35% of our NGL production was committed to Phillips 66 and CPChem, under 15-year contracts, the primary production commitment of which expired in December 2014 and began a ratable wind down period and expires in January 2019. This

**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS — Continued**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

concentration of credit risk may affect our overall credit risk, in that these customers may be similarly affected by changes in economic, regulatory or other factors. Where exposed to credit risk, we analyze the counterparties' financial condition prior to entering into an agreement, establish credit limits and monitor the appropriateness of these limits on an ongoing basis. We may use various master agreements that include language giving us the right to request collateral to mitigate credit exposure. The collateral language provides for a counterparty to post cash or letters of credit for exposure in excess of the established threshold. The threshold amount represents an open credit limit, determined in accordance with our credit policy. The collateral language also provides that the inability to post collateral is sufficient cause to terminate a contract and liquidate all positions. In addition, our master agreements and our standard gas and NGL sales contracts contain adequate assurance provisions, which allow us to suspend deliveries and cancel agreements, or continue deliveries to the buyer after the buyer provides security for payment in a satisfactory form.

### **Contingent Credit Features**

Each of the above risks is managed through the execution of individual contracts with a variety of counterparties. Certain of our derivative contracts may contain credit-risk related contingent provisions that may require us to take certain actions in certain circumstances.

We have International Swaps and Derivatives Association, or ISDA, contracts which are standardized master legal arrangements that establish key terms and conditions which govern certain derivative transactions. These ISDA contracts contain standard credit-risk related contingent provisions. Some of the provisions we are subject to are outlined below.

- If we were to have an effective event of default under our DCP Midstream Amended and Restated Credit Agreement that occurs and is continuing, our ISDA counterparties may have the right to request early termination and net settlement of any outstanding derivative liability positions.
- Certain of our ISDA counterparties would have the right to reduce our collateral threshold to zero, potentially requiring us to fully collateralize any commodity contracts in a net liability position, when our or DCP Partners' credit rating is below investment grade.
- In some cases, our ISDA contracts contain cross-default provisions that could constitute a credit-risk related contingent feature. For example, if we were to fail to make a required interest or principal payment on a debt instrument, above a predefined threshold level, and after giving effect to any applicable notice or grace period as defined in the ISDA contracts, our ISDA counterparties may have the right to request early termination and net settlement of any outstanding derivative positions.

Our commodity derivative contracts that are not governed by ISDA contracts do not have any credit-risk related contingent features.

Depending upon the movement of commodity prices and interest rates, each of our individual contracts with counterparties to our commodity derivative instruments or interest rate swap instruments are in either a net asset or net liability position. As of March 31, 2015, we had less than \$1 million of individual commodity derivative contracts that contain credit-risk related contingent features that were in a net liability position and have not posted any cash collateral relative to such positions. If we were required to net settle our position with an individual counterparty, due to a credit-risk related event, our ISDA contracts may permit us to net all outstanding contracts with that counterparty, whether in a net asset or net liability position, as well as any cash collateral already posted. As of March 31, 2015, we have not been required to post additional collateral. Although our commodity derivative contracts that contain credit-risk related contingent features were in a net liability position as of March 31, 2015, the net liability position would be partially offset by contracts in a net asset position.

### **Collateral**

As of March 31, 2015, we had cash deposits with counterparties of \$27 million, included in other current assets in the condensed consolidated balance sheets, to secure our obligations to provide future services or to perform under financial contracts. Additionally, as of March 31, 2015, we held cash of \$8 million, included in other current liabilities in the condensed consolidated balance sheet, related to cash postings by third parties and letters of credit of \$40 million from counterparties to secure their future performance under financial or physical contracts. Collateral amounts held or posted may be fixed or may vary, depending on the value of the underlying contracts, and could cover normal purchases and sales, services, trading and hedging contracts. In many cases, we and our counterparties have publicly disclosed credit ratings, which may impact the amounts of collateral requirements.

**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS — Continued**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

Physical forward contracts and financial derivatives are generally cash settled at the expiration of the contract term. These transactions are generally subject to specific credit provisions within the contracts that would allow the seller, at its discretion, to suspend deliveries, cancel agreements or continue deliveries to the buyer after the buyer provides security for payment satisfactory to the seller.

**Offsetting**

Certain of our derivative instruments are subject to a master netting or similar arrangement, whereby we may elect to settle multiple positions with an individual counterparty through a single net payment. Each of our individual derivative instruments are presented on a gross basis on the condensed consolidated balance sheets, regardless of our ability to net settle our positions. Instruments that are governed by agreements that include net settle provisions allow final settlement, when presented with a termination event, of outstanding amounts by extinguishing the mutual debts owed between the parties in exchange for a net amount due. We have trade receivables and payables associated with derivative instruments, subject to master netting or similar agreements, which are not included in the table below. The following tables summarize the gross and net amounts of our derivative instruments:

	March 31, 2015			December 31, 2014

## 12. Commitments and Contingent Liabilities

*Litigation* — The midstream industry has seen a number of class action lawsuits involving royalty disputes, mismeasurement and mispayment allegations. We are currently named as defendants in some of these cases and customers have asserted individual audit claims related to mismeasurement and mispayment. Management believes we have meritorious defenses to these cases and, therefore, will continue to defend them vigorously. These claims, however, can be costly and time consuming to defend. We are also a party to various legal, administrative and regulatory proceedings that have arisen in the ordinary course of our business, including, from time to time, disputes with customers over various measurement and settlement issues.

Management currently believes that these matters, taken as a whole, and after consideration of amounts accrued, insurance coverage and other indemnification arrangements, will not have a material adverse effect upon our condensed consolidated results of operations, financial position or cash flows.

**DCP MIDSTREAM, LLC**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS — Continued**  
**Three Months Ended March 31, 2015 and 2014**  
**(unaudited)**

*General Insurance* – Our insurance coverage is carried with an affiliate of Phillips 66, an affiliate of Spectra Energy and third-party insurers. Our insurance coverage includes: (1) general liability insurance covering third-party exposures; (2) statutory workers' compensation insurance; (3) automobile liability insurance for all owned, non-owned and hired vehicles; (4) excess liability insurance above the established primary limits for general liability and automobile liability insurance; (5) property insurance, which covers the replacement value of real and personal property and includes business interruption; and (6) insurance covering our directors and officers for acts related to our business activities. All coverage is subject to certain limits and deductibles, the terms and conditions of which are common for companies with similar types of operations.

*Environmental* — The operation of pipelines, plants and other facilities for gathering, processing, compressing, transporting, or storing natural gas, and fractionating, transporting, gathering, processing and storing NGLs and other products is subject to stringent and complex laws and regulations pertaining to health, safety and the environment. As an owner or operator of these facilities, we must comply with laws and regulations at the federal, state and local levels that relate to air and water quality, hazardous and solid waste management and disposal, and other environmental matters. The cost of planning, designing, constructing and operating pipelines, plants, and other facilities incorporates compliance with environmental laws and regulations and safety standards. In addition, there is increasing focus, from city, state and federal regulatory officials and through litigation, on hydraulic fracturing and the real or perceived environmental impacts of this technique, which indirectly presents some risk to our available supply of natural gas. Failure to comply with these various health, safety and environmental laws and regulations may trigger a variety of administrative, civil and potentially criminal enforcement measures, including citizen suits, which can include the assessment of monetary penalties, the imposition of remedial requirements, and the issuance of injunctions or restrictions on operation. Management believes that, based on currently known information, compliance with these laws and regulations will not have a material adverse effect on our condensed consolidated results of operations, financial position or cash flows.

We make expenditures in connection with environmental matters as part of our normal operations. As of March 31, 2015 and December 31, 2014, environmental liabilities included in the condensed consolidated balance sheets as other current liabilities amounted to \$4 million and \$5 million, respectively. As of March 31, 2015 and December 31, 2014, environmental liabilities included in the condensed consolidated balance sheets as other long-term liabilities amounted to \$10 million and \$9 million, respectively.

### **13. Guarantees and Indemnifications**

We periodically enter into agreements for the acquisition, contribution or divestiture of assets. These agreements contain indemnification provisions that may provide indemnity for environmental, tax, employment, outstanding litigation, breaches of representations, warranties and covenants, performance of DCP Partners or other liabilities related to the assets being acquired, contributed or divested. Claims may be made by third parties or DCP Partners under these indemnification agreements for various periods of time depending on the nature of the claim. The effective periods on these indemnification provisions generally have terms of one to 15 years, although some are longer. Our maximum potential exposure under these indemnification agreements can vary depending on the nature of the claim and the particular transaction. We are unable to estimate the total maximum potential amount of future payments under indemnification agreements due to several factors, including uncertainty as to whether claims will be made under these indemnities. We have issued guarantees and indemnifications for certain of our consolidated subsidiaries.

### **14. Restructuring Costs**

As part of our effort to create efficiencies and reduce costs, we are implementing a plan to reduce general and administrative and non-core operational costs. In January 2015, we announced the initial phase of this cost reduction plan, which involved the elimination of certain corporate employee positions. As a result, we recorded one-time employee termination costs of approximately \$6 million, which are included in restructuring costs within total operating costs and expenses in the condensed consolidated statement of operations for the three months ended March 31, 2015.

As of March 31, 2015, approximately \$1 million of the \$6 million restructuring charge incurred is included in other current liabilities and is expected to be paid out prior to December 31, 2015. Additionally, we expect to incur further severance costs of approximately \$1 million related to this initial phase of our restructuring plan. The severance costs estimate could change based on the number of employees that work through the required service period and the timing of those departures.

We have identified additional opportunities to streamline operations and identify cost savings. The costs associated with these actions will be recorded when specified criteria are met, such as abandonment of leased facilities, contract and project termination, consolidation of facilities and employee relocation.

**15. Supplemental Cash Flow Information**

	<b>Three Months Ended</b>	
	<b>March 31,</b>	
	<b>2015</b>	<b>2014</b>
	<b>(millions)</b>	
Cash paid for interest, net of capitalized interest.....	\$ 82	\$ 86
Income tax refunds received, net of cash paid for income taxes .....	\$ (1)	\$ (2)
Non-cash investing and financing activities:		
Tax distributions payable to members.....	\$ —	\$ 61
Property, plant and equipment acquired with accounts payable.....	\$ 118	\$ 67
Other non-cash changes in property, plant and equipment.....	\$ 4	\$ —

During the three months ended March 31, 2015 and 2014, we received distributions from DCP Partners of \$50 million and \$35 million, respectively, which have been eliminated in consolidation.

**16. Subsequent Events**

We have evaluated subsequent events occurring through May 11, 2015, the date the condensed consolidated financial statements were issued.

On April 28, 2015, DCP Partners announced that the board of directors of DCP Partners' general partner declared a quarterly distribution of \$0.78 per unit, payable on May 15, 2015 to unitholders of record on May 8, 2015.

In April 2015, DCP Partners filed a new universal shelf registration statement with the SEC, that became effective upon filing, in order to replace an existing shelf registration statement that was set to expire. As with the expiring shelf registration statement, the new universal shelf registration statement also allows DCP Partners to issue an unlimited amount of common units and debt securities. No common units or debt securities have been issued under this registration statement.
